

BENEFON RECEIVES \$10M ORDER FOR TWIG DISCOVERY

Travel Safety Group, based in Fort Myers, Florida has placed an order in excess of \$10 million USD for Benefon's TWIG mobile navigation device. First shipments were made over the past two months with the remainder of the volume to be shipped during the first half of 2007.

Travel Safety has launched the GEOS System - a range of travel safety and travel security services, which offer travel safety and comprehensive travel security by using Benefon's GPS technology. Benefon's devices allow TSG and their GEOS program of travel safety and security to offer an entire range of proactive travel safety and travel security services including hostage survival training, critical alert messages notifying travellers of any emerging threat to health or life in the area they are currently in, advising of travellers if they about to enter a dangerous part of a foreign city, what is the security assessment and particular hazards of going to a particular country plus a broad range of corporate security services, including medical and political evacuation thus providing unsurpassed protection across the globe.

Benefon's GPS cell-phones will be used to support the GEOS operations in the United States. The TWIG Discovery and the new TWIG GPS Locator have been integrated into the patented GEOS System thus enabling GEOS to deliver their extensive range of travel safety and travel security services to both domestic and international travellers with pinpoint accuracy helping to keep them safe and secure.

"Benefon is offering a new direction in the security market. It is based on the integration of our many years of expertise in the GPS industry and best practices from the security industry," said Tomi Raita, CEO of Benefon. "Our mobile location devices offer a radical departure from existing location systems by enabling organizations to bring all that functionality together in a convenient format. Customers' response to the Benefon product family has been extremely positive."

Through a unique combination of Benefon technology and world class intelligence and security services, GEOS is able to monitor the location of an individual to an accuracy of fifteen feet almost anywhere in the world and constantly update that client with relevant information and alert messages. If the event of an emergency situation, the press of a single button on the TWIG Discovery or on the GPS Locator will automatically send a distress signal (together with exact GPS coordinates) to the GEOS Command and Control Center in Houston. Here, on GEOS' Global Emergency Monitoring system, digital maps display the exact location of the individual together with latitude and longitude and trained operators can immediately swing into action to provide assistance 24/7 and 365 days a year.

One of the unique features of the GEOS/Benefon tracking and locating system is the facility for corporations and family to locate individuals from their own personal computers so long as they have been supplied with the correct codes to access the system.

Peter Chlubek, Chairman of TSG stated that, "With our travellers now able to be equipped with a GPS phone that is registered with our patented GEOS System, we can ensure that our members receive all

information that is relevant to wherever they may be on the planet. Our GEOS Command and Control Center, through our Global Emergency Monitoring system, can notify up to one million members per hour. We call it our GEM. It's an immensely powerful tool in providing proactive emergency information that helps keep our members safe".

About Benefon

Benefon is a leader in GSM/GPS mobile telematics equipment and solutions.
